FACT SHEET – HIV/AIDS and Tuberculosis (TB) in Maryland, 2013

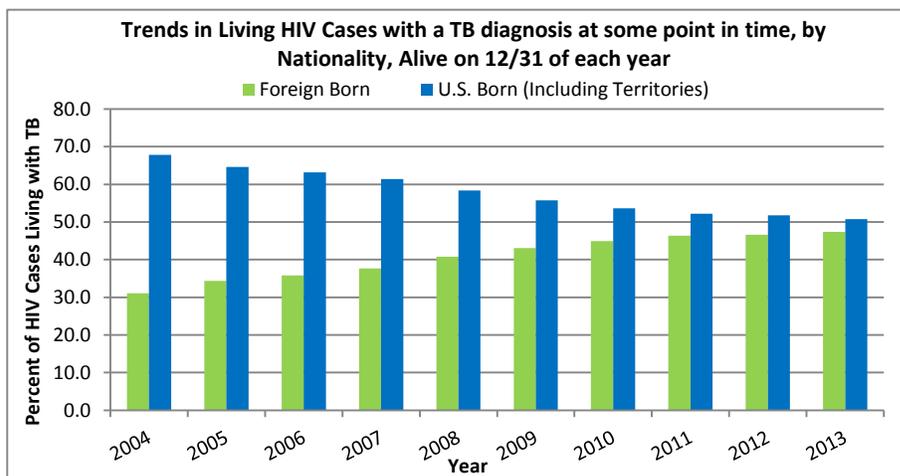

- Of the 1,396 reported HIV diagnoses during 2013 in Maryland, 16 (1.1%) were also diagnosed with TB in 2013.

- The number of TB cases among reported HIV cases (by year of TB diagnosis) peaked in 2005 with 43 cases and decreased to 16 TB diagnoses in HIV cases (with or without AIDS) in 2013.

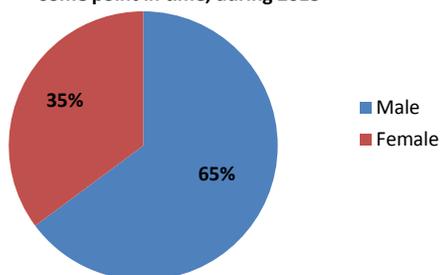

- The rate of newly reported HIV cases in 2013 was 28.1 per 100,000 population. The rate of newly reported TB cases in 2013 was 3.0 per 100,000 population.* The rate of newly reported TB cases in 2013 was 52.0 per 100,000 in people living with HIV. In other words, 1 in every 1,922 people living with HIV in 2013 were diagnosed with TB at some point in their lifetime.

- Of the 30,759 total living Maryland HIV cases in 2013, 384 (1.2%) had a TB diagnosis at some point in time. Of these, 182 (47%) were born in the U.S. or U.S. Territory and 195 (51%) were foreign born. Of the foreign born, 66% originated from Africa. The proportion of foreign born HIV cases with a TB diagnosis at some point in time has been increasing since 2002.

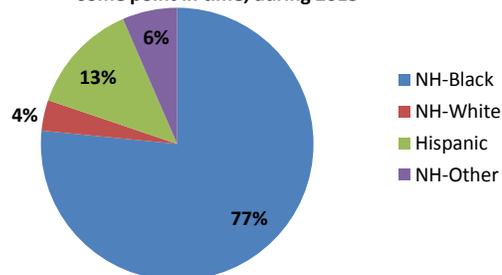

- Among the 384 people living with HIV in 2013 that have had a TB diagnosis at some point in time, 35% were female, 65% were male, 77% were non-Hispanic (NH) black, 4% were NH-white, 13% were Hispanic, and 6% were another or mixed race.

Gender of Living HIV Cases with a TB diagnosis at some point in time, during 2013

Race/Ethnicity of Living HIV Cases with a TB diagnosis at some point in time, during 2013
